

THE PROJECT

In 2001 The Bakersfield Business Conference appointed Universal Fabric Structures to design and construct a new facility, after the event had outgrown its prior symposium marquee venue.

The new configuration called for the fabrication of a cost effective modular structure constructed on grass, without footings, that could be cost effectively erected and dismantled annually for the one day event.

Today the structure has been relocated to Phoenix, Arizona as a permanent auction facility and municipal event structure.

Client	Bakersfield Business Conference
Location	Bakersfield - California, USA
Application	Events
Building Type	S-Span A Profile
Size	11,155m ² (97m wide x 125m long)
Frame	Hot dip galvanised structural steel frame
Fabric	PVC Polyester
Features	Open sidewalls Seating capacity up to 10,000
