

THE PROJECT

Universal Fabric Structures was selected by Mainzeal Property & Construction Pty Ltd for the hire of a 2,600m² fabric structure as part of a large soil remediation project in downtown Auckland, New Zealand.

A temporary, fully sealed structure was required to contain contaminated soil during the remediation works. Mainzeal selected a UFS Alu-Span TFS 40m wide x 65m long aluminium structure with Ferrari PVC blackout fabric, customised with personnel and vehicle access roller doors, as well as a custom curtain solution to separate the working area contained within the structure.

The remediation works, which commenced in January 2010, are expected to be completed by September 2011. The Alu-Span TFS rental was installed in late September for a two month period. The structure is to be reused for upcoming events in and around the Auckland area.

Client	Mainzeal Property & Construction Pty Ltd
Location	Auckland, New Zealand
Application	Remediation
Building Type	Alu-Span TFS Studio
Size	2,600m ² (40m wide x 65m long)
